

Engineering Services

UNSURPASSED ENGINEERING AND PROFESSIONAL SKILLS

World-class Engineering and Professional Services for all Projects and Needs

Terremark's Engineering Services help customers develop complete solutions. From planning and network architecture to implementation and project management, Terremark's Engineering Services can help you get the most out of your presence in our facilities or in any customer site. Our engineering capabilities span the entire spectrum of telecom networks. Skilled engineers are available on an hourly or project basis. Using a Request For Proposal (RFP) Template, customers can initiate a dialogue with Terremark's Engineering Services professionals detailing the specific needs on a case-by-case basis. Due to the wide variety of needs and the different variables of each project, Terremark Engineering Services are quoted with a Statement Of Work (SOW) in response to the RFP on an individual case basis only.

Engineering Capabilities

Terremark's Engineering services give customers access to world-class engineering talent and project management services. The service provides for timely and efficient implementation of projects, while reducing or eliminating the cost of having a permanent skilled staff.
